

Business IT Support

PAVELCOMM

Business IT Support

Your workday shouldn't be spent stressing over minor IT support issues.

IT managers should spend their time looking for and implementing technology to improve the end user experience and increase the productivity of the business. Pavelcomm supports IT departments for businesses in a number of ways, whether you need a virtual CIO and technology strategy developed, need assistance on a major IT project, or just want help managing and maintaining all of the company's routine technology needs.

Pavelcomm will work along side you as your partner, and provide an extra set of hands to help you with your

business IT support needs, so that you can spend your time working on a more strategic use of technology.

A Virtual CIO to Help You Reach Your Goals

PavelComm offers your business a strategic and effective way to implement, design, and deploy technology. We are your virtual CIO who will develop this strategy and help you reach your business goals.

If needed, we can maintain and manage all of the company's technology, offering 24/7 support services, so you don't have to worry about it. As your virtual CIO, we customize our recommendations and solutions to fit your specific business needs.

Proactive Monitoring Stops Problems Before They Happen

For 24 hours a day, 7 days a week, 365 days a year, we are proactively monitoring your network. If something within the network is not functioning properly, one of our highly trained technicians receives an alert and the problem is fixed before it has the chance to cause any damage.

You will never have to worry about your network experiencing downtime due to technology issues - our proactive monitoring stops issues before they happen. You gain an entire team of professionals to assist your IT employees.

Backups and Business Continuity to Keep Your Business Successful after Disaster

Disasters can happen at any time to any business. With our disaster and backup recovery plan, you can greatly minimize the risk of data loss and downtime.

More than 25% of businesses that suffer data loss or a disaster never recover, but with a disaster and backup recovery plan, your business won't fall into that statistic. Our customized plan gives your business the security of knowing that you will never be the cause of business failure because of a security breach or technology problem. Planning for a disaster will ensure business continuity. We even offer the planning and execution of the relocation of your technology.

24/7 Emergency Support to Help You Anytime

You're already working long hours and probably even weekends as needed. Do you really want to be on call 24/7, too? Our staff provides one-on-one attention to your team, so your technology is always taken care of. Even if you need help after hours, our staff is on call - with the click of a mouse or a phone call, one of our engineers will be available to support you 24/7 and 365 days a year.
